

# RAILcloud

## Efficiency via pan-European cross-linking

RAILcloud is a powerful online information-platform for all companies in the rail business. Every company providing a service can present its complete service portfolio in the RAILcloud. Examples are:

- Maintenance workshops
- Leasing companies for freight waggons or locomotives
- Suppliers of components
- RU/TOC

Every company can state which sites it owns, what services it provides where and what verifications/certificates or approvals it can show. Furthermore mobile maintenance teams can be embedded and their live geolocation data can be passed on.

Via the RAILcloud users can look for all services they need. RAILcloud offers many search and filter options to easily find the needed services quickly and accurately. All results are

displayed on an interactive map. With this map also mobile maintenance teams can be localized. It is possible to search for different service offers and combine them with each other in any manner, for instance:

Who can undertake tank cleaning for methanol and VPI-EMG inspection level G4.0?

Constantly recurring questions related to day-to-day operating business can be answered with the help of the RAILcloud with one mouse-click, for example:

- Which workshop is nearby?
- Who can lease a vehicle at short time?

RAILcloud will be extended continually and enlarged to a pan-European service catalogue for the rail business. Users of RAILcloud are amongst others DB Cargo AG as well as the members of Cargo Rail Service Center e.V.

## Facts & Features

### The advantages of RAILcloud at a glance

- Free of charge
- Quick and transparent overview
- Pan-European coverage
- Localization of mobile teams

**Take advantage of this opportunity and register your company free of charge and with minimal effort!**

RAILcloud 

## RAILcloud registration

Just a few clicks for more attention!

Fill in your company data as well as the data for your administrative contact in the form shown on: [www.sternico.com/en/products/railcloud/registration/](http://www.sternico.com/en/products/railcloud/registration/)

- After reviewing your data, your administrative contact will receive your login data. Your company data is already integrated at this point in time.
- Your login data enables you to edit your company profile on your own as well as set up additional locations.
- Your data is visible to other users directly after registration.

Sico Algermissen  
CEO | Partner

„In order to enhance the availability of freight waggons and locomotives, strong partners are needed. By using RAILcloud purchasers in companies get a direct overview of the service offers concerning the European rail market. Because of this, great rationalization effects can be reached, especially in the field of mobile maintenance, because live geolocation data of maintenance teams can be requested.“
